

CloudSync Backup Service — FAQ

Product FAQ, last updated for CloudSync v4.2

General

Q: What is CloudSync?

A: CloudSync is an automated backup service that continuously syncs files from your desktop, mobile, and network drives to encrypted cloud storage, with point-in-time recovery for up to 180 days.

Q: Which platforms are supported?

A: Windows 10/11, macOS 12+, and Linux (Ubuntu, Debian, Fedora) via the desktop client. iOS and Android are supported for viewing and restoring backups only, not for initiating new backups.

Plans & Storage

Q: How much storage do I get?

A: The Starter plan includes 100GB, Professional includes 1TB, and Business includes 5TB per seat with pooled storage across the organization.

Q: What happens if I exceed my storage limit?

A: New backups pause automatically and you'll receive an email and in-app notification. Existing backed-up files remain safe and accessible; you will not lose any previously synced data.

Q: Can I change plans mid-cycle?

A: Yes. Upgrades apply immediately with a prorated charge for the remaining billing period. Downgrades take effect at the start of the next billing cycle.

Security

Q: How is my data encrypted?

A: Files are encrypted with AES-256 both in transit (TLS 1.3) and at rest. Business plan customers may optionally enable customer-managed encryption keys (CMEK).

Q: Does CloudSync support two-factor authentication?

A: Yes, via authenticator app (TOTP) or SMS. Business plan admins can enforce mandatory 2FA org-wide from the admin console.

Recovery

Q: How far back can I restore a file?

A: Point-in-time recovery is available for the past 180 days on all plans. Business plan customers can extend this to 365 days as a paid add-on.

Q: I accidentally deleted a synced folder. Can I get it back?

A: Yes — deleted files are retained in a recovery bin for 30 days before permanent removal, and can be restored from the web dashboard under "Recently Deleted."

Billing

Q: Is there a free trial?

A: Yes, a 14-day free trial of the Professional plan is available, no credit card required. It automatically reverts to a storage-limited free tier (5GB) if not upgraded before the trial ends.
